Android development free course udacity

Start your career as an Android developer. Learn best practices for mobile development, build a portfolio of apps, and publish your own app to Google Play. What makes an app intuitive or easy to use? What makes it hard or frustrating? Learning the foundations of good design and platform-specific design patterns will help you create better apps for your users. This course will show you what it takes to ship polished apps, whether you're part of a development team, an independent app developer, or simply a programmer interested in Android development best practices. In this free course—developed by experts at Google—you will learn the fundamentals of building Android applications using Kotlin. The course covers architecture components, multi-screen navigation, data persistence, RESTful APIs and Material Design. By the end of the course, you'll be able to create well-designed Android applications using Kotlin that can connect to the internet, store data and navigate between screens. Kotlin is an open-source, modern programming language that lets developers use both object-oriented and functional programming techniques. It is concise, safe, and fully interoperable with Java. Kotlin is an official language for Android development and the community of Kotlin developers is growing rapidly, with major companies like Netflix, Pinterest, and Google using Kotlin. Learn Python, NumPy, Pandas, Matplotlib, PyTorch, Calculus, and Linear Algebra—the foundations for building your own neural network. Beginner With over 1 billion Android devices already activated, Android represents an incredible opportunity for developers. As Android continues to grow beyond smartphones, it will become the brains behind invisible, ubiquitous cloud-connected computing. The skills you learn in this course will help you build awesome apps for smartphones and tablets today, and propel you towards exciting opportunities in Android's future. By the end of this course, you'll build a cloud-connected Android app, and understand the tools, principles, and patterns that underlie all Android development. You'll understand the challenges associated with developing for the mobile environment (and how to overcome them), learn how to build a great user experience for Android devices, and apply this knowledge to your own projects. If you're a consumer of technology, this course will help you to become a creator of technology. You are only limited by your imagination! Android powers over 80 percent of the world's smartphones, and represents an incredible opportunity for developers everywhere. The next billion people coming online will interact with the internet for the very first time on a mobile device. Building for Android gives you the best opportunity to reach these users and make an impact — both in your community, and on the world. Kotlin is an official language for Android development, and can be used in a variety of other applications, from back-end development to data analysis. It is an open-source, modern programming language that lets developers use both object-oriented and functional programming techniques. It is concise, safe, and fully interoperable with Java. The community of Kotlin developers is growing rapidly, with major companies like Netflix, Pinterest, and Google using Kotlin. This free course was developed by Kotlin experts at Google, and will teach you how to add a range of advanced features to your app, covering topics such as notifications, maps, testing, identity management, and more. If you're a consumer of technology, this course will help you to become a creator of technology. You are only limited by your imagination! Android powers over 80 percent of the world's smartphones, and represents an incredible opportunity for developers everywhere. The next billion people coming online will interact with the internet for the very first time on a mobile device. Building for Android gives you the best opportunity to reach these users and make an impact -- both in your community, and on the world. With over 1.4 billion Android devices worldwide and 82% market share, Android offers you unprecedented opportunities to build apps that can be used by people around the world. The next billion people coming online will interact with the internet for the very first time on a mobile device. Building for Android gives you the best opportunity to reach these users and make an impact -- both in your community, and on the world.
